TROPICAL DISEASES BULLETIN

ISSUED UNDER THE DIRECTION OF THE HONORARY MANAGING COMMITTEE OF THE TROPICAL DISEASES BUREAU.

General Editor:
THE DIRECTOR OF THE BUREAU.

VOL. 2.

MAY 30, 1913—DECEMBER 15, 1913.

COMMONWEALTH MYCOLOGICAL INSTITUTE
26 MAY 1971

London:
TROPICAL DISEASES BUREAU,
Imperial Institute, S.W.

Sold by BAILLIÈRE, TINDALL & COX,
8, Henrietta Street, Covent Garden, W.C.

1913.

HONORARY MANAGING COMMITTEE.

Chairman:

The Right Honourable Sir J. West Ridgeway, G.C.B., G.C.M.G., K.C.S.I., LL.D.
(who is also Chairman of the Advisory Committee of the Tropical Diseases Research Fund).

Sir John Rose Bradford, K.C.M.G., F.R.S.
(representing the Royal Society).

Surgeon-General Sir David Bruce, C.B., F.R.S.

Surgeon-General Sir R. Havelock Charles, I.M.S., G.C.V.O.

Colonel Sir William B. Leishman, R.A.M.C., F.R.S., K.H.P.

Sir John M'Fadyean, M.R.C.V.S.

Sir Patrick Manson, G.C.M.G., F.R.S.

Sir Ronald Ross, K.C.B., F.R.S.

Sir S. Stockman, M.R.C.V.S.

Mr. J. A. C. Tilley
(representing the Foreign Office and Sudan Government).

Mr. H. J. Read, C.M.G.
(representing the Colonial Office),
with
Mr. A. Berriedale Keith, M.A., D.C.L.
of the Colonial Office, as Secretary.

STAFF OF THE BUREAU.

Director:

A. G. Bagshawe, M.B., B.C., D.P.H. Cantab.,
of the Uganda Medical Staff.

Assistant Director:

G. C. Low, M.A., M.D., *Lecturer, London School of Tropical Medicine.*

Librarian:

R. L. Sheppard.

Sectional Editors:

Andrew Balfour, C.M.G., M.D., D.P.H. Cantab.

Fleet-Surgeon P. W. Bassett-Smith, R.N., C.B., M.R.C.P.

Lieut.-Colonel C. Birt, R.A.M.C.

Aldo Castellani, M.D.

Captain S. R. Douglas, I.M.S. (retd.).

H. B. Fantham, B.A., D.Sc.

Edward Hindle, Ph.D.

R. T. Leiper, D.Sc., M.B., Ch.B.

F. M. Sandwith, M.D., F.R.C.P.

J. Henderson Smith, M.B., Ch.B.

David Thomson, M.B., Ch.B., D.P.H.

C. M. Wenyon, M.B., B.S., B.Sc.

Warrington Yorke, M.D.

Editor of the Tropical Veterinary Bulletin:

A. Leslie Sheather, B.Sc., M.R.C.V.S.

PLATES, Etc.

PAGE

Photographs of Railway Cutting and Flooded Paddy Fields in Kurunegala, Ceylon, showing breeding-places of Anophelines, *to face* 536
Sketch Map of Kurunegala town, Ceylon, *to face* 538
Drawings of Indian Larvivorous Fish (*Haplochilus panchax*, *Ambassis ranga*, *Trichogaster fasciatus*, *Lebias dispar*, and *Nuria danrica*) *to face*... 652–653

ILLUSTRATIONS IN THE TEXT.

Diagrams of *Filaria loa* and *F. bancrofti* to illustrate points of measurement 86
Toxoplasma gondii, endocellular or free in the peritoneal exudate of infected mice 260
Haemocystozoon brasiliense 265
Janthinosoma lutzi ♀ carrying eggs of *Dermatobia cyaniventris* Macquart (× $6\frac{1}{2}$) 528
Plan of four-roomed house suitable for residents in malarious districts 540
Apparatus for fixing in rain pipes to prevent ingress of mosquitos to cisterns, and for screening large air vents or well mouths 543
Tails of *Acanthocheilonema perstans*, *Filaria ozzardi* (*demarquayi*), *Loa loa*, and *F. bancrofti*, showing papillae, etc. 625
Dorsal rays of *Agchylostoma ceylanicum* vel *braziliense* and *A. duodenale* 632
Agamomermis restiformis 637

ERRATA.

p. 268. Franchini's paper, paragraph 5, third line, for "*Maccellie anophelie*" read "*Baccellie anophelie.*"
p. 368, third line from top, for "*Herpetomonas vestimenti*" read "*Herpetomonas pediculi.*"
p. 464, sixteenth line from top, for "cytosome" read "cytostome."
p. 468, Nicolle & Conor's paper, paragraph 1, sixth line, for "Ixodus" read "Ixodes."

INDEX OF SUBJECTS.

Amoebiasis (Amoebic Dysentery and Liver Abscess), 163-172. 173-174. 387-396.

Amoebic Dysentery, 163-167, 173-174, 387-394.

America, middle north-west States of, amoebic infections in, 390.

Amoeba limax type, cysts of, 388.

amoebae, parasitic and their relation to disease, 387.

animals, infection with human pathogenic amoebae, 174.

chronic amoebic dysentery, 163.

cultivation of amoebae, action of drugs and bacteria in, 173, 174.

cysts of amoebae in faeces, 388.

diagnosis :

identification of entamoebae in fresh preparations, 389.

El Tor, pathogenic entamoeba of, 167.

emetine hydrochloride. *See* treatment.

entamoebae, clinical identification of, 389.

— pathogenic, rectal inoculation into kittens as aid to identification, 389.

Entamoeba coli, 387, 389.

— — cysts of, 388, 390.

— *histolytica*, cysts of, 388, 389.

— — "spore cyst" forms in, simulated by budding and other forms of *E. tetragena*, 165, 389.

— — identity with *E. tetragena*, 166, 387, 389.

— — morphology and life cycle of, 387, 389.

— *minuta*, 389.

— *nipponica*, 166, 167.

— *tetragena*, budding and other forms in, simulating "spore cyst" forms of *E. histolytica* 165, 389.

— — cysts of, 390.

— — identity with *E. histolytica*, 166, 387, 389.

etiology of amoebic dysentery, 167.

incidence :

America, middle north-west States of, amoebic infections in, 390.

Amoebiasis—*cont.*

incidence—*cont.*

El Tor, pathogenic entamoeba of, 167.

Panama, pathogenic entamoeba of, 165.

Saïgon, amoebic dysentery at, 394.

Tunis, amoebic dysentery at, 163.

Panama, pathogenic entamoeba of, 165.

references to literature, lists of, i-iii, xxxv-xxxvi.

Rogers' method of treatment. *See* treatment by emetine hydrochloride.

Saïgon, amoebic dysentery at, 394.

treatment :

by emetine hydrochloride, 164–165, 390–393.

by enemata of emetine, 393.

— of ipecacuanha and oral administration of bismuth, 393.

— of kerosene oil, 390.

— of sugar solution, 174.

by ipecacuanha, 390.

by salvarsan, 393.

Tunis, amoebic dysentery in, 163.

Liver Abscess, 167-172, 394-396.

caries, costal, consecutive to liver abscess, 171.

complications in liver abscess, 168, 171, 395,

diagnosis, 168, 169, 170–171, 394–395.

— differentiation of hydatid cysts and liver abscess, 169.

gas in liver abscess cavity, 395.

Hong-Kong, liver abscess in, 170–171.

incidence :

Hong-Kong, 170–171.

Tonkin, 167, 396.

lung, treatment with emetine, of liver abscess which burst into, 170, 395.

references to literature, lists of, i–iii., xxxv–xxxvi.

symptoms, 171, 394.

Tonkin, clinical notes on liver abscess at, 167, 396.

Amoebiasis—*cont.*
treatment, 168, 171, 395, 396.
by aspiration, 169, 170, 171, 395, 396.
by emetine hydrochloride, 169, 170, 395, 396.
by lavage with ipecacuanha decoction, 395.

Beriberi, 77-85, 291-296, 595-610.
Africa, French West, beriberi in, 82, 83.
Amazon Valley, beriberi and peripheral neuritis in, 83, 292, 607.
'Antiberiberin, 296.
antineuritic bases of animal origin, 79, 293, 609.
— — of vegetable origin, 78, 293, 296, 602, 604, 609.
See also vitamines.
Billiton (Dutch East Indies), beriberi among mine-workers, 599.
blood-pressure in beriberi, 607.
— vessels in beriberi, 85.
'Cerolin,' 294.
China, beriberi in, 602.
contagion, 84, 602.
dropsy, epidemic, 606.
Dutch East Indies, beriberi among mine workers in, 599.
endemicity of beriberi in Europe, possibility of, 83.
— — — in S. America, 292.
etiology of beriberi, 78, 83, 291–292, 296, 298, 595–602, 608.
food deficiency theory, 82. 83, 84, 291, 292, 296, 595, 597, 598, 605.
infective theory, 84, 602.
toxic theory, 79, 595, 597.
— of deficiency diseases, 598, 605–606.
Europe, is beriberi endemic in ? 83.
fishing fleet at Tsishima Islands, epidemic in, 80.
food deficiency theory. *See* etiology of beriberi.
—: influence of various foods on beriberi, 78, 82, 296, 297, 595, 596.
fowls, polyneuritis in, 77, 293, 608, 609, 610. *See also* polyneuritis of birds.
'Furonculine,' 294.
guinea-pigs, action of yeast on multiple neuritis in, 294.
incidence:
Africa, French West, 82, 83.

Beriberi—*cont.*
incidence—*cont.*
America, South, 83, 292, 607.
China, 602.
Dutch East Indies (Billiton mine-workers) 599.
Europe, suggested endemicity in, 83.
in fishing fleet at Tsishima Islands, 80.
in Italian Navy, 81, 82.
Japan (in fishing fleet), 80.
Malay States (Kelantan), 601,
Nigeria, Southern, 292.
Philippine Islands, 81, 84.
— — Culion Leper Colony, 600.
St. Helena, 602.
Siam, 296.
infantile beriberi, 81–83.
infectiousness of beriberi, experiments on, 84.
Italian Navy, beriberi in, 81 82.
Japan, beriberi epidemic in fishing fleet, 80.
Kelantan, Malay States, beriberi in, 601.
'Levurinose,' 294.
man, beriberi experimentally produced in, 597.
milk, vitamine fraction from, 79.
mould found in faeces of beriberi patients, 84.
Nigeria, Southern, beriberi in, 292.
'Oryzanin,' 610.
peas and peanuts, preventive properties of, against polyneuritis gallinarum, 78.
Philippine Islands, beriberi in, 84, 600.
— — infantile beriberi in, 81.
pigeons, experimental polyneuritis in, 292, 294, 295, 597, 600.
— action of yeast on, 294.
polyneuritis gallinarum, 77, 608, 609, 610. *See also* polyneuritis in birds.
— — production of, by various foodstuffs and extracts, 78, 608.
polyneuritis in birds, properties of certain food stuffs and extracts against, 77, 80, 293, 597, 600, 609, 610.
prison, beriberi epidemic in a, 82.
prophylaxis, 296, 595.
— infantile beriberi, 81.
quinine and cinchona, temporary curative action in polyneuritis of birds, 293.

Beriberi—*cont.*
rats, retarded development due to alcoholic extraction of substances from food, 598.
references to literature, lists of, iii–iv., xxxvi–xxxvii.
researches on beriberi during 1911–1913, review of, 604.
rice, beriberi and, 78, 79, 80, 81, 82, 296, 297.
—, beriberi among non-eaters of, 292, 607.
—, character of, which prevents beriberi, 598.
—, effect of storage on, 600, 601.
—, milling of, 599.
rice-bran, crystalline substance from, which cures polyneuritis in birds, 293.
— diet and beriberi among mine workers in Billiton, 599.
rice-polishings, polyneuritis produced by subcutaneous injections of artificially fermented solutions of, 78.
— — vitamine fraction from, 295, 602.
St. Helena, beriberi among Boer prisoners of war at, 602.
ship beriberi, 78, 80, 81, 82, 84, 291.
Siam, investigations on beriberi in, 296.
treatment, 597.
— of experimental beriberi with extracts of spinal cord, 609.
Tsishima Islands, beriberi epidemic in fishing fleet at, 80.
vitamines, 78, 79, 80, 291, 293–296, 602–606.
vitamine-fraction in milk, 79.
— — from rice polishings, 295, 602.
— — from yeast, 80, 294, 295.
yeast, action on multiple neuritis of guinea-pigs and pigeons, 294.
— vitamine fraction in, 80, 294, 295.
'Zymin,' 294.

Blackwater Fever, 158-162, 230-232, 566-569:
Africa, reports on blackwater fever in tropical, 158–159.
Brazil, blackwater fever in, 161, 231.
Cecropia, treatment with alkaloid of, 162.
cell inclusions in, 231.
etiology, 158, 159, 160, 231, 568.
haematuria, malarial, 232.
haemoglobinuria, malarial, 160.
haemolytic action of quinine, 566.
incidence:
Africa, 158–159.
in Brazil, 161, 231.
in Palestine, 107.
protozoal-like structure in blood in, 160.
quinine in relation to, 158, 159, 160, 162.
— haemolytic action of, 566.
references to literature, lists of, iv., xxxvii.
treatment: 161, 162, 230–231, 569.
— by antivenin, 569.
— by alkaloid of *Cecropia*, 162.
— by injection of sugar solution, 230.
— surgical, of suppression in, 161.

Cholera, 197-201, 373-386.
antitoxins, 376, 381, 382.
carriers, 201, 375, 376.
— human, at Tor, with notes on the vibrios isolated from them, 376.
— — treatment by enemata of specific serum, 201.
cholera vibrios:
action of some air organisms on biological properties of, 380.
agglutination test for, 374, 376.
comparison of some non-pathogenic vibrios with, 382.
cultivation of, on dahlia medium, 197.
— on modified Hesse's medium, 198.
— on Kabeshima's alkaline-haemoglobin-extract-agar, 379.
— on Kraus's alkaline broth, 379.
— on Pilon's agar medium, 379–380.
differentiation of, by growth on selective media, 197, 379.
from human carriers at Tor, 376

Cholera—*cont.*
cholera vibrios—*cont.*
Hesse's medium in isolation of, 198.
inagglutinable vibrios, 383.
influence of free nitrous acid on production of nitrites by, 201.
inhibition of cholera-red reaction by nitrite destroying organisms grown in symbiosis with, 380.
Pfeiffer's reaction, 374.
proteolytic and hemolytic action of, 198.
Sarcina lutea, action of, upon 382
viability in milk and in flies, 197.
— in the water of the Nile, 384.
virulence, increase of, 381–382.
cultivation. *See* cholera vibrios, cultivation of,
dahlia agar as differential medium, 197.
diagnosis by growth of vibrios on selective media, 197, 379.
flies, viability of cholera vibrios in, 197.
— as carriers, 198.
haemolytic and proteolytic action of cholera vibrios, 198.
Hesse's medium in isolation of cholera vibrios, 198.
immunity produced in monkeys after first cholera attack, 384.
— in man following protective inoculation, 385.
incidence :
Eastern Rumelia during Balkan war, 199.
Semarang, 378.
Shanghai, 198.
Sicily (especially Palermo), 200.
Tunisia (Ferryville), 377.
on U.S.S. " Helena," 198.
incidence of cholera since 1899 (sixth pandemic), 378.
India, protective inoculation in, 385.
inoculation, protective, against cholera, 385, 386. *See also* vaccines.
milk, viability of cholera vibrios in, 197.
monkeys, experimental infection with cholera, 383, 384.
Nile, viability of cholera vibrio in the water of the, 384.

Cholera—*cont.*
nitrite production in cholera, 201–202.
pernicious cholera-like attack, 377.
prophylaxis, 373–375, 377–383.
proteolytic and haemolytic action of cholera vibrios, 198.
references to literature, lists of, v.–vi., xxxvii.–xxxix.
Rumelia, Eastern, cholera in, during Balkan war, 199.
Semarang, cholera in during 1910–1912, 378.
serum, specific, treatment of carriers by enemata of, 201.
serum. *See also* toxins and antitoxins.
Shanghai, cholera at, 198.
Sicily (and Palermo), cholera in, 200.
Stagen, protective inoculation in, 386.
toxins and antitoxins, 376, 381, 382.
transmission of cholera to monkeys, 383, 384.
treatment : 199, 378.
by adrenalin, 199.
by intravenous infusion of saline (Rogers's method), 199.
— of healthy carriers by enemata of specific serum, 201.
Tunisia (Ferryville), cholera in, 377.
vaccination in India, 385.
— in Stagen, Dutch East Indies, 386.
vaccines :
Haffkine's, 385.
Kolle's, 200.
Lustig & Galeotti's, 200.
Wright's, 200.
viability of cholera vibrios in milk and flies, 197.
— — in the water of the Nile, 384.
water, examination and sterilisation of, 375, 377.

Dengue, 29-31, 107, 616-619.
blood-counts, differential, in dengue, 31.
Calcutta, epidemic at, in 1912, 30, 31.
Culex fatigans, 107, 617.
— *pipiens*, 30.
eosinophilia in dengue, 3.
Greece, dengue in, 24.
history of dengue, 29.

Dengue—*cont.*
incidence 29.
Calcutta, 30, 31
Greece, 24.
Jerusalem, 30.
Meerut, 617.
Palestine, 107.
on board ship, 30, 616.
incubation period in Meerut epidemic, 617.
Jerusalem, epidemic in, 30.
leucopenia in dengue, 29, 30, 31.
Meerut, dengue at, 617.
mosquito theory of transmission, 29, 30, 107, 617.
Palestine, dengue in, 107.
pappataci fever and dengue, comparison of, 30.
references to literature, lists of, vi., xxxix.
seven-day fever, identity with dengue, 30, 31, 617, 618.
symptoms, 29, 30, 31, 617.
leucopenia, 29, 30, 31.
slowing of pulse, 29.
three-day fever, identity with dengue, 30, 31.

Dracontiasis, *See* Filariasis (Dracontiasis).

Dysentery (Bacillary Dysentery, Ciliate Dysentery, Flagellate Dysentery, and Unclassed Dysentery), 172-175, 388, 394, 397-399.

Bacillary Dysentery, 172-173, 396-398.
asylum dysentery at Düren, 397.
— — in institutional children in Chicago, 398.
B. dysenteriae, type of, found in Tonkin, 174.
carbohydrate reactions of dysentery bacillus, 397, 398.
children, institutional, epidemic of dysentery in 398.
flies, dissemination of bacillary dysentery by, 172.
incidence:
Chicago, dysentery in institutional children in, 398.
Düren, asylum dysentery at, 397.
Saïgon, dysentery in, 394.
Tonkin, type of *B. dysenteriae* found in, 174.

Dysentery—*cont.*
Bacillary dysentery—*cont.*
media suitable for differentiation of dysentery bacilli, 397.
pseudo- and para- dysentery and their so-called mutation, 173.
references to literature, lists of, vi., xxxix.
Saïgon, dysentery in, 394.
Tonkin, type of *B. dysenteriae* found in, 174.
treatment of post-dysenteric conditions by collosol argentum, 175.
Y-dysentery, observations on, 396–397.

Ciliate Dysentery, 174, 175-176, 398, 399.
balantidic dysentery, summary of literature of, 398.
— —, treatment of, 175.
Balantidium coli, action of drugs on, 175.
Uronema caudatum, 174.

Flagellate Dysentery:
Lamblia intestinalis, cysts of, 388.
Prowazekia weinbergi, cysts of, 388.

Unclassed Dysentery, 173-175, 388, 394.
Blastocystis hominis, cysts of, 388.
dysentery in Kiao-Chau and Shantung, 174.
— in Saïgon, 394.
— in Tonkin, 174.
— in the tropics, 394.
etiology, symptomatology, and diagnosis of dysentery, 175, 394.
references to literature, lists of, vi.–vii., xxxix.

Fevers, Unclassed, 617-619.
'fièvre boutonneuse' in Tripoli, 109.
rat-bite fever, 307–308.
references to literature, lists of, vii., xxxix., xl.
Rocky Mountain Spotted Fever 108, 203-204, 307.
seven-day fever, 30, 31, 617, 618.
six-day fever, 618.
three-day fever, 30, 31.
Tripoli, unclassified fevers in, 618.

Filariasis, 86-103. 195, 196, 420-426, 624-625. 636-637.
abscess, filarial, 92, 93, 422–424.
Acanthocheilonema perstans, papillae of, 624, 625 (fig.).
Agamomermis restiformis from the human urethra, 637 (fig,)
Algeria, filariasis in native troops in, 87, 88.
blood, eosinophilia and other blood conditions in filariasis, 89, 90.
chyluria, case of, from Egypt, 90, 91.
— — from Martinique, 91.
cultivation of microfilariae, 422.
Devonshire, "filariasis" in, 103, 627.
diagnosis, differential, and morphology of microfilariae, 68 (fig.), 87, 89, 624, 625 (fig.).
Filaria bancrofti, morphology of, 420, 624, 625 (fig.).
— "*gigas*," 627.
— *loa* infection, history of cases of, 89, 90, 421.
— — morphology of, 624, 625 (fig.).
— — transmission experiments with mosquitoes, 195, 196.
— *restiformis*. *See Agamomermis restiformis*.
— *ozzardi* (*demarquayi*), 102, 625 (fig.).
— *perstans*. *See Acanthocheilonema perstans*.
— *volvulus*. *See Onchocerca volvulus*.
funiculitis, purulent, 96.
Guadeloupe, filariasis in, 102.
incidence of human filariasis :
Algeria, 87, 88.
Devonshire (*sic.*), 103.
Egypt, 90, 91.
Guadeloupe, 102.
Martinique, 91.
Nyasaland, 421.
Queensland, 420.
Sunda Islands, 421.
measurements of microfilariae. 422.
morphology and differential diagnosis of microfilariae, 86 (fig.), 87, 89, 624, 625 (fig.)
— of *Filaria bancrofit*, 420.
Nyasaland, filariasis in, 421.
Onchocerca volvulus, 196, 423, 424, 426.
Queensland, filariasis in, 420.
references to literature, lists of, vii., xl.
septicaemia of filarial origin, 94.
Filariasis—*cont.*
Sunda Islands, filariasis in, 421.
symptoms, 89, 90.
treatment :
aniline tartar emetic, 422.
arsenophenylglycin, 422.
atoxyl, 422.
salvarsan, 422.
— surgical, of lymphatic varicocele, 101.

Dracontiasis, 99-101, 636-637.
biology of guinea-worm, 100.
Calabar, guinea-worm at, 196.
cyclops, manner of infection of, 100, 636.
etiology of guinea-worm, investigation in, 636.
India, guinea-worm investigations in, 636.
Nyasaland, guinea-worm in, 626.
orchitis due to guinea-worm, 99
references to literature, lists of, vii, xl.
symptoms in case of guinea-worm, 637.

Elephantiasis, 96-99, 424-426.
bacillary elephantiasis, 99.
congenital elephantiasis, 97.
Elephantiasis nostras streptogenes, 425.
M'Bomou (French Equatorial Africa), elephantiasis in, 426.
pseudo - elephantiasis, fuso-spirillar association in, 98.
references to literature, lists of, vii., xl.
treatment :
operative, 96, 424–426.
by salvarsan, 97.
tubercular elephantiasis of vulva, 99.

Filariasis in Animals, 424, 426,
microfilariae of birds in Upper Senegal and Niger, 426.
Onchocerca gibsoni, morphology and life history of, 424.
references to literature, lists of, vii., xl.

Guinea Worm, *See* Filariasis Dracontiasis).

Heat Stroke, 645-650.
effects of exposure to intense heat on the working organism, 645.

Heat Stroke—*cont.*
India, heat-stroke in European troops in, 647, 650.
references to literature, lists of, viii., xl.
thermic fever, cases of, in fire-room of battle-ship, 649.
treatment and nature of heat-stroke, 646.

Helminthiasis, 177-195, 405-418, 623-638.
Agamomermis restiformis ? from the human urethra, 637 (fig.).
American Society of Tropical Medicine, discussion on comparative importance of intestinal parasites, 623.
America, Southern States of, intestinal parasites in, 193, 194.
Amphimerus noverca, 624.
Anguillula intestinalis infection in Cochin China, 189. *See also Strongyloides stercoralis.*

Ankylostomiasis, 181-188, 409-416, 632-634.
Agchylostoma braziliense, apparent identity with *A. ceylanicum*, 632 (figs.).
— *ceylanicum*, a new human parasite, 188.
— — apparent identity with *A. braziliense*, 632 (figs.).
albuminuria associated with ankylostomiasis, 184.
America, United States of, anti-hookworm campaign in, 182–183, 413–415.
Ankylostoma duodenale infection :
in Brazil, 410.
in China, 192, 193.
in Ladrone Islands, 418.
in Nigeria, Northern, 191.
in Nigeria, Southern, 413.
in Philippine Islands, 417, 628.
— — morphology of, 187, 626.
appendicitis and ankylostomiasis, 634.
Australia, ankylostomiasis in the Northern Territory, 413.
Belgium, ankylostomiasis in mine workers in, 181.
Brazil, ankylostomiasis in, 409.
cardiac dilatation associated with ankylostomiasis, 184, 410.
China, Southern, ankylostomiasis in, 185.
differentiation of species, 187.

Helminthiasis—*cont.*
Ankylostomiasis—*cont.*
eye complications associated with ankylostomiasis, 186.
Grenada, ankylostomiasis in, 184.
incidence of ankylostomiasis :
America, United States of, 182–183, 193, 194, 413–415
Annam, 192.
Australia, Northern Territory, 413.
Belgium, in mine workers, 181.
Brazil, 409, 410.
China, 185, 192, 193.
Grenada, 184.
Ladrone Islands, 418.
Malaya, 633.
Nigeria, Northern, 191, 628.
Nigeria, Southern, 412, 413.

Cysticercus cellulosae in the central nervous system, 408.
— *tenuicollis*, 628.
echinococcus cysts, experimental production of, 631.
Hymenolepis diminuta infection in a child at Grenada, West Indies, 626.
— *nana*. *See Taenia nana*.
incidence:
in America, Southern States of, 193, 194.
in Annam, 192.
in Northern Nigeria, 191, 628.
in Philippine Islands, 628.
Portugal, relative frequency of *T. solium* and *T. saginata* infection in, 181.

Helminthiasis—*cont.*
Taeniasis—*cont.*
Taenia (*Hymenolepis*) *nana* in S. Paulo, Brazil, 181.
Taenia saginata infection :
in America, Southern States of, 193, 194.
in Annam, 192.
in Northern Nigeria, 191, 628.
in Philippine Islands, 628.
in Senegal, 629.
—— perforation of duodenum and pancreas by, 407.
— *solium* in Annam, 192.
—— [?] in Northern Nigeria, 628.
toxic products of taenia, lesions produced by, 194, 418.
tapeworm infection. *See* **Taeniasis** and *Dibothriocephalus latus.*
thread worm infection. *See* *Oxyuris vermicularis* infection.
Tocotrema. See Yokogawa yokogawa.
toxins, helminthic and lesions of the ductless glands, 194, 418.
trematode, supposed miracidium and ovum of new, 627.
Trichinella, spurious record of, 190.

Trichocephaliasis.
Trichocephalus dispar. See Trichuris trichiura.
— *trichiuris. See Trichuris trichiura.*
Trichuris trichiura infection :
in America, Southern States of, 193, 194.
in Annam, 192.
in China, 193.
in Grand Comore, 417.
in Ladrone Islands, 418.
in Madagascar, 417.
in Nigeria, Northern, 191, 628.
in Nigeria, Southern, 413.
in North Nyasa, 411.
in Philippine Islands, 417, 418, 628.
in Senegal, 629.

Trichostrongylidae.
Trichostrongylus colubriformis, as a human parasite, 188.
— *instabilis,* 188, 189. [Synonym of T. *colubriformis.*]
Watsonius watsoni, 626.
Yangtse fever. *See* **Schistosomiasis**
Yokogawa yokogawa, 624.

Kala Azar, 115-124, 427-453.
anaphylaxis in infantile kala azar, 437.
animal origin ? is kala azar in Madras of, 428.
Assam, prevalence of endemic kala azar in, 432.
blood in leishmanial anaemia, 436.
— leishmania in peripheral, 430, 431, 436.
— resistance of red corpuscles in infantile kala azar, 440.
— a new sign in kala azar, from China, 447.
— serum, complement power in infantile kala azar, 438.
bugs, bed- ; development of *L. donovani* in, 429, 432.
—— as possible transmitters of kala azar, 427, 431.
calf, inoculation with *L. donovani,* 428.
canine kala azar, 122, 441–442, 448–449.
examination of dogs in India for, 427, 429, 432.
—— in Tashkent for, 448.
leishmania found in spinal marrow in, 122.
relation to human kala azar, 118, 428, 441, 442, 444.
transmission to rats, rabbits and guinea-pigs, 122.
cats, inoculation with *L. donovani,* 428.
China, kala azar in, 447.
Cimex lectularius, development of *L. donovani* in, 429.
— *rotundatus,* development of *L. donovani* in, 429.
" coccal bodies " from young Arab with kala azar, 119.
complications of infantile kala azar, 444.
Conorhinus rubrofasciatus as possible transmitter of Indian kala azar, 427.
development of blood parasites in invertebrate hosts, 430.
— of *L. donovani* in bugs, 429.
diagnosis of Indian kala azar :
by blood examination, 431, 434.
by spleen puncture, 431, 434.
differentiation of Indian kala azar and malaria, 434.
diagnosis of infantile kala azar :
by animal inoculation, 437.
by gland puncture, 438.
differentiation of infantile kala azar and malaria, 120.
dog, inoculation with *L. donovani,* 427, 428, 449.

Kala Azar—*cont.*
dog, infected with *L. donovani*, corneal opacity in, 449.
dogs, kala azar in. *See* canine kala azar.
fleas, transmission of kala azar to rats by, 115.
foxes, flying-, inoculation with *L. donovani*, 432.
gland puncture in diagnosis of infantile kala azar, 438.
goat, inoculation with *L. donovani*, 428.
Greece, infantile kala azar in, 445.
guinea-pigs, inoculation with *L. donovani*, 428.
—— with *L. infantum*, 437.
identity of the leishmaniae, 441, 446.
incidence of kala azar.
China, 447.
India, 427, 428, 429, 431, 432, 433, 434.

—— with *L. infantum*, 437, 449.
Italy, kala azar in, 118, 435–442.
jackals, inoculation with *L. donovani*, 428.
leishmaniae, identity of the, 441, 446.
Leishmania donovani :
action of leucocytes on, 117.
corneal opacity in dogs infected with, 449.

Kala Azar—*cont.*
Leishmania donovani—cont.
development in bugs, 427, 429, 431, 432.
infection, probable mode of, 427, 428.
inoculation into calf, 428.
—— cats, 428.
—— dogs, 427, 428, 448.
—— flying foxes, 432.
—— goat, 428.
—— guinea-pig, 428.
—— jackals, 428.
—— mice, 432.
—— monkeys, 428, 432.
—— pig, 428.
Leishmania infantum :
absence from human organs after death, 118, 119.
degenerative changes in, 438, 439.
infection in adults, 118.
inoculation into guinea-pigs, 437.
—— mice, 449.
mosquitoes, attempts to infect with splenic juice, 116.
leucocytes of guinea-pigs and rabbits, action on *L. donovani*, 117.
leucocytic inclusions in infantile kala azar, 446.
Madras, epidemiology of kala azar in, 432.
— is kala azar in, of animal origin ? 428.
malaria and Indian kala azar, relation of, 434.
— and infantile kala azar, differentiation of, 120.
—— diagnosis and treatment of, 434.
Mediterranean kala azar, 117–121, 435–446.
anaphylaxis in, 437.
blood, resistance of red corpuscles in, 440.
— serum, complement power in, 438.
complications in, 444.
diagnosis, 120, 437, 438.
incidence :
Greece, 445.
Italy, 118, 435–443.
Sicily, 117, 118, 121, 435, 440.
Spain, 443.
infection in adults, 118.
leucocytic inclusions in, 446.
malaria, differentiation from, 120.
recovery in, 121, 439, 444, 445.
seasonal incidence, 441.

Kalr Azar—*cont.*
Mediterranean kala azar—*cont.*
symptoms, 437, 444.
temperature curve in, 445.
transmission to rats by fleas, 115.
treatment, 121, 441, 444.
mice, inoculation with *L. donovani*, 432.
monkeys, inoculation with *L. donovani* 428, 432.
mosquitoes, attempts to infect from splenic juice from case of infantile kala azar, 116.
— possible protozoal parasite resembling leishmania in, 116.
— possible transmitters of Indian kala azar, 427.
pig, inoculation with *L. donovani*, 428.
rabbits, inoculation with *L. donovani*, 428.
rats, inoculation with *L. donovani*, 428, 432.
— transmission of infantile kala azar to, by fleas, 115.
recovery in infantile kala azar, 121, 439, 444, 445.
references to literature, lists of, xi.–xii., xliv.–xlvi.
Russia, kala azar in Caucasus District, 447.
Spain, infantile kala azar in, 443.
splenomegaly, rare form of, at Calabria, 119.
Sudan, peculiar "coccal body" from kala azar case in, 119, 120.
symptoms of Indian kala azar, 431, 435.
— of infantile kala azar, 437, 444.
temperature curve in infantile kala azar, 445.
transmission of canine leishmaniasis to rats, rabbits and guinea-pigs, 122.
— of Mediterranean kala azar to rats by fleas, 115.
treatment:
by arsenic (Ramalline), 121.
by atoxyl, 440.
by hectine, 444, 445.
by iodine ("iodone injectable Robin"), 445.
by mixture of camphor, creosote, turpentine and olive oil, 435.
by quinine, 434.
by sanatorium treatment, 440.

dengue and malaria in Palestine, 106.
"fièvre boutonneuse" in Tripoli, 109.
glanders-like disease in Rangoon, 107.
granuloma, coccidioidal, (California disease), 111, 309.
Guinea, New, leucocyte picture in natives of, 309.
Hanoi, statistics of disease in, in 1912, 212.
infectious diseases and their invertebrate transmitters, 113.
jaundice, infective, in Tripoli, 110.
Kamerun, statistics of autopsies in, 106.
"Mal d'Engasgo," 109.
malaria and dengue in Palestine, 106.
— and spider's web, 213.
meningitis, fulminating cerebro-spinal, in Jamaica, 104, 308.
mosquito-proof house for the tropics, 112.
mosquitoes and cess-pools, 212.
— destruction of, in the tropics, 213.
— larvicides and natural enemies of, 306.
nervous diseases of warm climates, 211.
Palestine, malaria and dengue in, 106.
parasites of some tropical diseases, photomicrographs of, 211.
porocephaliasis in man, 208.
Rangoon, glanders-like disease in, 107.
rat-bite disease, 307-308.
references to literature, lists of, xxviii–xxxi, lxi–lxiv.
Rocky Mountain spotted fever, 108.
— — — biology of tick, 203-204, 307.
spider's web and malaria, 213.
Stegomyia distribution in India 305.
— *fasciata*, 305.
Stomoxys calcitrans, life history of, 113.
tick bite, muscular paralysis following, 204, 205.
ticks, biology of Rocky Mountain spotted fever tick, and North American ticks of genus *Dermacentor*, 203–204, 307.

Miscellaneous—*cont.*
Tripoli, infective jaundice in, 110.
— macular fever in, 109.
venom of *Bitis arietans* or puff adder, 209.
— from cutaneous mucous glands of batrachians, 209–210.
viper bites, immunisation against, by inoculating secretions from glands of batrachians, 209.
— venom, researches on, 209.
vomiting sickness in Jamaica, 104, 308.

Mosquitoes, and their destruction.
fish as mosquito destroyers, 652–654 (2 plates).
Malaya, anopheline mosquitoes in, 650–651.
salt marsh mosquitoes, control of, 651–652.
see also under Malaria.

Myiasis, 526-534.
Auchmeromyia luteola ("Congo floor maggot" or "Ver de Case") 530.
breast, myiasis of the, due to *Musca putrida*, 530.
Calliphora erythrocephala infection in British Guiana, 533.
— *vomitaria* infection associated with ankylostome anaemia, 533.
Chrysomyia macellaria (screw worm) infection in the nose, 531.
— — — in British Guiana, 532.
— — — treatment of, 532.
— — mosquito as carrier of, 529.
— *violacea* infection in British Guiana, 532.
Congo floor maggot (*Auchmeromyia luteola*), 530.
Cordylobia anthropophaga (Ver du Cayor) infection in French and Belgian Congo, 530.
— — mode of penetration of skin by, 531.
— — mosquito as carrier of, 528.
— *rodhaini* (Lund's larva), 530, 531.
— — mosquito as possible carrier of, 528.

Myiasis—*cont.*
creeping eruption, two cases with recovery of larvae, 527.
Dermatobia cyaniventris (Ver macaque), mosquitoes as carriers of larvae of, 527, 528 (fig.), 529.
Eristalis, critical study of myiasis due to, 533.
Guiana, British, myiasis in 532, 533.
Helophilus pendulus, 533.
Hypoderma bovis, lesions due to, 526, 527.
intestinal myiasis, 533, 534.
Janthinosoma lutzi as carrier of eggs of *Dermatobia cyaniventris* 527, 528 (fig.).
liver abscess associated with intestinal myiasis, 534.
Lund's larva (*Cordylobia rodhaini*), 528, 530, 531.
mosquitoes as carriers of *Chrysomyia macellaria* (screw worm), 529.
— — — of *Cordylobia anthropophaga* (Ver du Cayor), 528.
— — — of *Cordylobia rodhaini* (Lund's larva), 528.
— — — of *Dermatobia cyaniventris* (Ver macaque), 527, 528 (fig.), 529.
Musca domestica, gastro-intestinal myiasis due to, 534.
— *putrida*, myiasis of breast, due to, 530.
Oestrus ovis ("Tamné" and "Thimni"), myiasis in North Africa due to, 531.
references to literature-lists of, xvii, lii.
Sarcophaga carnaria infection in British Guiana, 532.
— *pyophila*, myiasis caused by, 529.
Sarcophagidae, species of, found in human myiasis, 529.
screw worm (*Chrysomyia macellaria*) infection in British Guiana, 532.
— — — in the nose, 531.
— — mosquito as carrier of, 529.
— — treatment of, 532.
"Tamné" identity with *Oestrus ovis*, 531.
"Thimni" identity with *Oestrus ovis*, 531.
treatment of myiasis at the Georgetown Hospital, British Guiana, 533.

Myiasis—*cont.*
— of screw worm infection, 532.
"Ver de Case" or Congo floor maggot (*Auchmeromyia luteola*) infection in Belgian Congo, 530.
"— du Cayor" (*Cordylobia anthropophaga*) infection in French and Belgian Congo, 530, 531.
"— macaque" (*Dermatobia cyaniventris*), mosquitoes as carriers of, 527, 528 (fig.), 529.

Pappataci, Phlebotomus or Sandfly Fever, 23-29, 611-616.
Aden, phlebotomi and pappataci fever in, 613.
Africa, West, phlebotomi in, 27, 28.
Agama colonorum, as host of phlebotomi, 28.
ague confounded with pappataci fever, 611.
Algeria, phlebotomi in, 23.
army of India, pappataci fever among personnel of, in 1911, 611, 612.
Atlantic Fleet, pappataci fever among personnel of British men-of-war in the, 25.
bionomics of phlebotomi, 26–29, 614, 616.
"birigui" local name for phlebotomi in Brazil, 28.
Brazil, phlebotomi in, 28.
breeding places of phlebotomi, 615.
China Station, pappataci fever among personnel of British men-of-war on the, 25.
Corsica, phlebotomi in, 23.
Crete, pappataci fever in, 23, 25, 27, 611.
dengue and pappataci fever, 30, 31, 611, 614.
diagnosis, 25, 614.
etiology, 611, 614.
France, phlebotomi in, 23.
geckos (wall-lizards) as natural hosts of phlebotomi, 615, 616.
Greece, pappataci fever, three-day fever and dengue in, 24.
Hemidactylus coctaei and *gleadovii* as hosts of phlebotomi, 616.
India, pappataci fever in, 611–612.

Pappataci, &c.—*cont.*
Italy, three-day fever in, 23, 24.
jail population of India, pappataci fever among, in 1911, 611–612.
lizards as natural hosts of phlebotomi, 28, 615, 616.
— blood of, as food of phlebotomi, 28.
— faeces of, as food of phlebotomi larvae, 616.
malaria and pappataci fever, differentiation of, 25.
Maltese Islands, phlebotomi in, 26.
Mediterranean station, pappataci fever among personnel of British men-of-war on the, 24, 25.
mushrooms, decayed, as food of phlebotomus larvae, 616.
navy, phlebotomus fever in the 24, 25, 611.
Phlebotomus, bionomics of, 26–29, 614–616.
— biting season of, at Pusa, 616.
— infective period in, 614.
— larvae, food of, 616.
— length of life of, in captivity, 616.
— lizards as natural hosts of, 28, 615, 616.
— method of keeping alive in captivity for experimental work, 618.
— of Tokar, Anglo-Egyptian Sudan, bionomics of, 614.
— synopsis of the genus, 28, 29.
Phlebotomus antennatus, 27.
— *argentipes*, 29.
— *babu*, 29.
— *cruciatus*, 29.
— *duboscqui*, 27, 28.
— *himalayensis*, 29.
— *intermedius*, 28.
— *longipalpis*, 28.
— *major*, 29.
— *malabaricus*, 29.
— *mascitti*, 28.
— *minutus*, 26, 27, 28, 29, 613, 615–616.
— — natural hosts of, 615.
— *nigerrimus*, 26, 29.
— *papatasii*, 23, 26, 27, 28.
Phlebotomus perniciosus, 26.
— *rostrans*, 29.
— *squamipleuris*, 27.
— *squamiventris*, 28.
— *vexator*, 29.
— *zeylanicus*, 29.
Portugal, phlebotomi and pappataci fever in, 23.
prophylaxis, 611.

Pappataci, &c.—*cont.*
Pusa, Bengal, breeding places and natural host of Phlebotomi at, 615.
pyrexia of uncertain origin and pappataci fever, 24, 25, 612, 613.
references to literature, lists of, xvii–xviii, lii–liii.
Sicily, three-day fever in, 23.
Soudan, phlebotomi in the, 27.
Suda Island, pappataci fever among British soldiers at, 27.
— — pappataci fever among personnel of French man-of-war, 611.
Sudan, Anglo-Egyptian (Tokar), bionomics of phlebotomus at, 614.
symptoms, 23, 24, 25, 613.
toads, phlebotomi observed on, 616.
Tokar, Anglo-Egyptian Sudan, bionomics of phlebotomus at, 614.
Zanzibar, pappataci fever among personnel of British man-of-war at, 25.

Pellagra, 477-499.
America, United States of, pellagra in, 477–479, 492, 493.
Aspergilli, spores of, and pellagra, 486, 498.
Austria, pellagra in, 492.
blood findings in pellagra, 492.
cane-sugar, consumption of, and pellagra, 491.
children, pellagra in, 478, 488, 497.
Cimex and pellagra, 477, 482.
death-rate in pellagra, 477, 478.
deficiency of nutrition, is pellagra due to ? 481–482, 485.
diagnosis of pellagra, 478, 480, 492.
— of skin lesions in pellagra, 492.
drug intoxication and pellagra, 499.
England, pellagra in, 488, 489, 490, 497.
epidemiology of pellagra, intensive study of, in S. Carolina, 477.
Pellagra—*cont.*
etiology of pellagra, 480, 481, 482, 484, 485, 490, 491, 496.
Aspergilli spores and pellagra, 486, 498.
cane-sugar, consumption of and pellagra, 491.
deficiency of nutrition, 481–482, 485.
filarial theory, 486, 487.
insect transmission theory, 479, 481, 482–483, 484, 485, 489.
maize theory, 478, 479, 481, 485, 490, 498, 499.
photodynamic theory, 481.
Simulium transmission theory, 479, 481, 483, 484, 485, 489.
toxins, intestinal, 480, 481.
water, drinking, 479.
filarial theory of causation of pellagra, 486, 487.
Germany, pellagra in, 479–480.
guinea-pigs, maize-feeding experiments on, 498.
histological changes in nervous system in pellagra, 497.
incidence of pellagra:
America, United States of, 477–479, 492, 493.
Alabama, 478.
Arkansas, 478.
Atlanta, 493.
Carolina, North, 493.
— South, 477, 479, 482.
Georgia, 479.
Kentucky, 479.
Louisiana, 493.
Oklahoma, 478.
Texas, 478, 479.
Virginia, 492.
Austria, 492.
England, 488, 489, 490, 497.
Germany, 479–480.
Nyasaland, 480.
Panama Canal Zone, 491.
St. Lucia, W. Indies, 495–496.
insects, as possible etiologic factor in pellagra, 482–483, 484, 485.
maize, damaged, hypersensibility of pellagrins to injections of extracts of, 499.
— feeding experiments on guinea-pigs, 498.
— theory of causation of pellagra, 478, 479, 481, 485. 490, 498.
men and women, relative frequency of pellagra among, 482.
— — relative frequency of pellagra among prisoners in Nyasaland, 480.

Pellagra—*cont.*
monkeys, transmission of pellagra to, 494–495.
mosquito, pellagra and the, 484.
mould-spores, vitality of, 498.
nervous system, histological changes in, 497.
Nyasaland, pellagra in, 480.
pathological changes in pellagra, 495.
"pellagrogenin" (extract of damaged maize), hypersensibility of pellagrins to injections of, 499.
photodynamic theory of causation of pellagra, 481.
post-mortem findings in pellagra, 488, 489, 490, 495–496, 497.
pregnancy, apparent inhibition of pellagrous symptoms during, 477.
prophylaxis, 480.
rats, feeding experiments on, 496.
references to literature, lists of, xviii–xix, liii–liv.
relapses in pellagra, 481, 485.
Rome, province of, pellagra in, 479.
Simulium in causation of pellagra, 479, 481, 483, 484, 485, 489.
surgery, influence of, on pellagrous skin eruption, 478.
— in treatment, 493.
Stomoxys calcitrans and pellagra, 477, 484.
streptobacillus of pellagra, 486.
symptoms, 477, 480, 481, 488, 489, 491, 493, 496, 497.
Thompson-McFadden Pellagra Commission, 477, 482.
toxins, intestinal, in causation of pellagra, 480, 481.
treatment of pellagra, 481, 491, 493, 494.
arsenic, 481.
colloids, 494.
hydrotherapy, 493.
lactic acid bacilli, 494.
nitric acid, 491.
salvarsan, 493.
surgical, 493.
water, drinking; in causation of pellagra, 479.
women and men, relative frequency of pellagra among, 480, 482.
— pellagra in, 477, 478, 479, 490, 493.

Plague, 68-76, 271-283, 518-525.
acari infesting fleas, 69.
Africa, German East, plague epidemic in, 521.
ants preying on captive fleas, 69.
Arctomys bobac (tarbagan) and plague, 519, 520.
Astrakhan, plague prophylaxis in, 520.
— Steppes, examination of rodents on, 282, 283.
Bacillus pseudo-tuberculosis rodentium, 75.
Bacterium pseudo-pestis murium, 76.
"Bellailsa," plague on British steamer, 272.
Brazil, plague in S. Paulo, 521–522.
bubonic plague, epidemiological features of, 518.
— — history and prevention of, 278.
bugs, bed-, transmission attributed to, 278.
cajeput oil, action on fleas,
Cambridgeshire, rat-fleas in, 73, 74.
camels and plague, 520, 521.
carbon disulphide and monoxide, action on fleas, 70.
Ceratophylus fasciatus, 73, 74, 280, 519, 523.
— — bionomics of, 280–281.
— *silvantievi*, 520.
China, plague, in, 68, 71, 271.
Chiropodomys anna, 69.
— *gliroides*, 69.
Cimex rotundatus, non-transmission of plague by, 70.
climate and plague, 518.
Crocidura coerulea, 69.
Ctenocephalus canis, 275.
cockroaches, susceptibility to plague bacilli, 74.
Ctenopsylla musculi, 280.
Ctenophthalmus agyrtes, 73, 74.
diagnosis:
guinea-pig test in, 518, 519.
precipitin reaction in, 522.
Dutch vaccine, 74, 75.
Echidnophaga gallinae found on rats, 275.
England, rat-fleas in, 73.
erratum, 76.
Essex, North, rat-fleas in, 73.
fauces, infection of the, 272.
flea-traps, guinea-pigs as, 518, 519, 521.
fleas, rat-, attacked by acari and ants, 69.
— — bionomics of, 69, 280, 281, 525.
— — breeding observations, 69.

Plague—*cont.*
fleas, rat-, developmental stages of, 69, 280.
— — distance leaped by, 69.
— — humidity favourable to breeding, 69.
— — in England, 73, 74.
— — in Java, 69.
— — infesting rats, number of, 69, 523.
— — infesting rats, number of and plague, 69.
— — length of life apart from host, 280, 525.
— — length of life without food, 69, 280, 281, 525.
— — method of microscopical examination of, 73.
— — seasonal variation in, 73, 519.
— — theory of plague transmission by, 74, 518.
— —transmission experiments with, 70.
— — value of search for, in detection of plague, 519.
ground squirrels, plague epizootic among, 282.
guinea-pigs as flea traps, 518, 519, 521.
Haffkine's prophylactic, 74, 283.
Hamburg District, plague cases in, 273,
hamster, rôle of, in plague transmission in Astrakhan, 520, 521.
history of bubonic plague, 278.
— of plague in Munich in 15th and 16th centuries, 279.
Hong Kong, plague in, 68, 71, 271.
Iloilo, plague outbreak in, 277, 278.
incidence of plague throughout the world during 1912, 68.
incidence:
Africa, German East, 521.
Astrakhan, 520.
Brazil, 521–522.
China, 68, 71, 271.
England, 73,
Hamburg, 273.

Anomalurus fraseri, Trypanosoma denysi from, 51.
Anopheles maculipennis, new parasite from, 268.
Aponomma trimaculatum, haemogregarine from, 471.
Ardea goliath, leucocytozoa from, 259.
Athena noctua, blood parasites from, 265.
Australia, protozoa in native animals in, 470.
Baccellie anophelie, 268.

Protozoology—*cont.*
Binucleata group, classification of protozoa in, 45.
birds of Australia, protozoa in, 471.
— of Corsica, protozoa in, 471.
— of the Congo, protozoa in, 259, 472.
— haemoproteus in, 471.
— leucocytozoa in, 259, 471.
— sarcosporidia in, 469.
— toxoplasma in, 262.
Bothrops lanceolatus, 264.
Box boops, flagellate from stomach of, 267, 268.
Brazil, haemogregarine from viper from, 264.
— new protozoal parasite of man in, 45, 46, 265 (fig.), 266, 406.
Bufo sp., haemogregarine from, 259.
Canis adustus, leucocytogregarina from, 259.
Caprimulgus, *Trypanosoma thiersi* from, 471.
— *europaeus*, trypanosome from, 471.
—*fossei*, leucocytozoon from, 472.
— — trypanosomes from, 472.
Cavia cobaya, Kurloff bodies in blood of, 59.
Cercomonas longicauda, 465.
Chelodina longicollis, haemogregarine from, 472.
— — *Trypanosoma chelodina* in, 471.
Chlamydodera orientalis, *Trypanosoma chlamydoderae* from, 471.
Chlamydozoa, 470.
classification, 45, 473, 474.
Colius erythromelon, sarcosporidian from, 469.
Congo, Belgian, some haematozoa from, 259.
— protozoa in birds of the, 472.
Corsican birds, protozoa in, 471.
Corvus corone, haemoproteus in, 471.
— — leucocytozoa in, 471.
Crithidia, 50, 51, 266, 473, 474.
— *hyalommae*, 465.
— *pangoniae*, 51.
— *tabani*, 52.
— *tenuis*, 52.
Crocodilus niloticus, haemogregarine from, 264.
Cryptobia intestinalis, 268.
Ctenocephalus canis, specific name of herpetomonas in, 52.
Culex fatigans, natural host of *Herpetomonas culicis*, 49.

Protozoology—*cont.*
culture medium, (Ponselle's) modification of the NN., 60.
Cyclopterus lumpus, flagellate from stomach of, 267.
Cysotrypanosoma, 50.
Diplomastix dahlii, 267.
Dipsadomorphus fuscus, haemogregarine from, 471.
dog infected with *Toxoplasma gondii*, 260.
Drosophilae, trypanosome from 50.
erratum, 60.
Eurystomus gularis, trypanosome from, 472.
eutrypanosomes, 50.
Falco hypoleucus, *Proteosoma praecox* from, 471.
— — *Trypanosoma avium* from, 471.
fishes, intestinal trypanoplasma of, 267.
flagellates in gut of *Haematopota*, 51.
— kinetonucleus in division of, 267.
— of cat and dog fleas, 463.
— of flies, 50, 463.
— of mosquitoes, 48, 49.
fleas of cat and dog, flagellates from, 463.
flies, flagellates from, 50, 463.
Francolinus bicalcaratus leucocytozoon from, 472.
— — trypanosome from, 472.
Fringilla petronia, leucocytozoa from, 471.
— — trypanosomes from, 471.
Glossina palpalis, sporogony of a haemogregarine in, 55.
gondi, toxoplasma of the, 52, 53.
Gongylus, sp., *Haemogregarina sergentium* from, 58.
Grahamella, 56.
— of yellow mouse in West Africa, 473.
guinea-pigs, Kurloff bodies in blood of, 59.
Haematopota, flagellates in gut of, 51.
— *vanden brandeni*, *Crithidia tenuis* in gut of, 52.
haematozoa from Belgian Congo, 259.
Haemocystozoon brasiliense, a new parasite in man in Brazil, 46, 265 (fig.), 266 466.
Haemogregarina pettiti, 264.
— *pococki*, 264.
— *roulei*, 263.
— — multiplication forms of, 467.

Protozoology—*cont.*
Haemogregarina roueli, transmission of, 467.
— *sergentium*, mitochondria of, 58.
— *varanicola*, 471.
haemogregarines from native Australian animals, 471.
— from Belgian Congo, 259.
— sporogony of, in *Glossina palpalis*, 55.
Haliastur girrenera, *Trypanosoma majus* from, 471.
Halteridium from birds in Belgian Congo, 259.
— *noctuae*, 265.
Herpetomonas brasiliense, 266.
— *ctenocephali*, 52.
— — infection of mice with, 463.
— *gracilis*, 474.
— *culicis*, 48, 49.
— *jaculum*, 474.
— *muscae domesticae*, 463, 465, 473.
— *pseudoleishmania*, 52.
—*Herpetomonidae* (=*Trypanosomidae* Doflein) revision of family, 473, 474.
Heteromita dahlii Apstein, 267.
Hyalomma aegyptium, Crithidia from, 465.
insects, trypanosomids from, 266.
jackal, leucocytogregarina from, 259.
kinetonucleus in division of flagellates 267.
Kurloff bodies, notes on, 469.
— — in mononuclear blood cells of *Cavia cobaya*, 59.
Lachesis alternatus, haemogregarine from, 263, 467.
— *lanceolatus*, haemogregarine from, 264.
leech, division of *Trypanoplasma cyprini* from the crop of a, 267.
Leptomonas, 266, 463.
— *drosophilae*, 473.
— *pangoniae*, 51.
— *pycnosomae*, 474.
Leptotrypanosomes, 50.
Leucocytogregarina from the jackal in Belgian Congo, 259.
Leucocytozoa from avian genera in Belgian Congo, 259.
— from birds of the Congo, 472.
— from Corsican birds, 471.
Leucocytozoon ardeae, 259.
— *eurystomi*, 472.
— *francolini*, 472.
— *gentili*, 471.
— *lovati*, 467.

Protozoology—*cont.*
Leucocytozoon marchouxi, 471.
—*schoutedeni*, 259.
— *ziemanni*, 265, 466.
— *zuccarelli*, 471.
lizards, haemogregarines of, 58, 259. 471.
Lucilia serenissima, malpighian trypanosomes from, 50.
Malpighian trypanosomes of muscids, 50.
Melophagus ovinus, flagellate from, 266.
mitochondria of *Haemogregarina sergentium*, 58.
mole, *Grahamella* from, 56.
mosquitoes, flagellates of, 48, 49.
Mus maurus, *Grahamella* from, 56.
— *musculus*, *Toxoplasma* from, 263.
Muscids, trypanosomes of, 50.
Ninox boobook, trypanosome from, 471.
Notophoyx novaehollandiae, *Trypanosoma notophoyxis* from, 471.
Numida meleagris, leucocytozoon from, 472.
— — trypanosome from, 472.
Ovoplasma anucleatum, a new pathogenic organism in man 47, 48.
Padda oryzivora, toxoplasma from, 262, 263.
Pangonia infusca, leptomonas from, 51.
Petrodromus tetradactylus Plasmodium from, 259.
— — trypanosome from, 259.
Plasmodium from the insectivore *Petrodromus tetradactylus*, 259.
—*pteropi* in the flying-fox, 471.
Proteosoma praecox in *Falco hypoleucus*, 471.
Protozoa, survey and classification of the, 45, 473, 474.
Prowazekia asiatica, 55.
— *javanense*, 54.
— *terricola*, a new flagellate from sick soil, 267.
Pteropus gouldi, *Plasmodium pteropi* from, 471.
Ptilopus superbus, *Haemoproteus* from, 471.
Pycnonotus tricolor, trypanosome from, 472.
python, haemogregarine from, 264.
Python molurus, haemogregarine from, 264.
— *spilotes*, var. *variegatus*, haemogregarine from, 471.

Protozoology—*cont.*
rabbit, toxoplasma of, 52, 53, 259, 260.
Rana nutti, protozoal parasite from, 57.
rat, *Grahamella* in, 56.
references to literature, lists of xxxi-xxxii, lxiv-lxv.
Rhynchoidomonas genus, 474.
— *drosophilae*, 51.
Sarcocystis colii in the African mouse-bird, 469.
Selenomonas, 473.
snakes, haemogregarines from, in Australia, 471.
— — in Belgian Congo, 259.
— — of, 263, 264, 467.
Strix flammea trimaculata, leucocytozoon from, 472.
——— trypanosome from, 472.
tick, *Crithidia hyalommae* from, 465.
— haemogregarine from, 471.
Todd's bodies from a chameleon in West Africa, 473.
Toxoplasma avium, 262, 263.
— *cuniculi*, 52, 53, 259, 260.
— — flagellate forms and gametes of, 261.
— *gondii*, 52, 53, 259, 260 (figs.) 261, 262, 263, 468.
— — transmission experiments with mice, 262.
— *musculi*, 263.
Toxoplasma, animal reactions of, 261.
— dog infected with, 260.
Toxoplasmosis of birds, 262.
Trigonocephalus lanceolatus, 264.
Tropidorhynchus corniculatus, leucocytozoon from, 471.
Trypanoplasmoides intestinalis, 268.
trypanoides, 50.
Trypanoplasma of fishes, 267.
— *congeri*, 267.
— *cyprini*, division of, in crop of leech, 267.
— *intestinalis*, 267–268.
— *varium*, culture *in vitro* of, 59.
— *ventricoli*, 267.
Trypanosoma avium, 471, 472.
— *barbatulae*, 60.
— *brodeni*, 259.
— *caprimulgi majus*, 472.
— — *minus*, 472.
— *chelodina*, 471.
— *chlamydoderae*, 471.
— *denysi*, 51.
— *eurystomi*, 472.
— *francolini*, 472.
— *grayi*, 51.
— *laverania*, 471.

Protozoology—*cont.*
— *Trypanosoma lewisi*, 465, 1.47
— *majus*, 471.
— *muscae domesticae*, 50.
— *notophoyxis*, 471.
— *pycnonoti*, 472.
— *rhodesiense*, 464.
— *thiersi*, 471.
— *viduae*, 472.
trypanosome of *Numida meleagris*, 472.
— of the owl *Ninox boobook*, 471.
trypanosomes from Congo birds, 472.
— from Corsican birds, 471.
— from mammals and birds in Belgian Congo, 259.
— of muscids, 50.
(For further references to trypanosomes *see under* Sleeping Sickness).
Trypanosomidae (*Herpetomonadidae*) revision of family, 473.
trypanosomids of insects, 266.
tsetse-fly, sporogony of a haemogregarine in, 55.
Turtur auritus, leucocytozoon from, 471.
Varanus niloticus; haemogregarine from, 259.
—*varius*, haemogregarine from, 471.
Vidua serena, trypanosome from, 472.
viper, haemogregarines from, the, 263, 264, 467.

Rat Bite Disease, 307–308.
references to literature, xxviii, lxi.

Relapsing Fever (and Spirochaetosis), 143-149, 365-372.
Africa, North, studies on relapsing fever of, 369. 370.
African form of relapsing fever immunity inheritance, 370.
amino derivatives of arsenobenzol, 146.
antiformin, action on spirochaetes, 148.
Argas and spirochaetes, 365,
arsenical compounds, action on experimental fowl spirochaetosis, etc., 145,
——— action on spirochaetes in culture, 146.

Relapsing Fever—*cont.*
arsenobenzol, amino derivatives of, 146.
see also salvarsan.
biology of spirochaetes of relapsing fever, 144.
bionomics of lice which convey relapsing fever, 367.
blood, degenerating appearances in, resembling spirochaetes, 371.
— in fowl spirochaetosis, leucocytic variations in, 148.
— in relapsing fever, cells, penetration by spirochaetes, 148.
— leucocytic variations in, 370.
cells of hosts, relation to, of spirochaetes, 148, 149.
chemotherapy of spirochaetosis 145, 146.
Cristispira tapetos, spore formation in, 149.
Darjeeling District, spirillar fever in, 369.
dimethylaminotetraminoarsenobenzol, treatment of fowl spirochaetosis with, 145, 146.
differentiation of spirochaete, races by "crossed immunity" test, 147.
etiology of relapsing fever, 143.
fatality of relapsing fever in Darjeeling District, 369.
flagellates in *S. novyi*, 149.
see also Herpetomonas in lice.
fowl spirochaetosis, hyperleucocytosis in, 148.
— — treatment of, with dimethylaminotetraminoarsenobenzol, 145, 146.
— — — — with salvarsan, 145.
gentian violet, action on spirochaetes, 146.
guinea-pig, spirochaete in, 371.
hydrochloric acid, action on spirochaetes, 146.
Herpetomonas in lice, 368.
hexaminoarsenobenzol, parasiticidal action of, 146.
immunity to relapsing fever, short duration of, 147.
— — — studies on, with spirochaete cultures, 147, 148.

leucocytic variations in:
fowl spirochaetosis, 148.
relapsing fever, 370.
lice, bionomics of, 367.
— transmission by, of relapsing fever:
experimental, 143.
natural, 367, 370.
mercury compound ($HgCl_2$) action on spirochaetes, 146.
methyl in compounds, action of 146.
mice, infection of, with *S. duttoni*, and action of salvarsan on, 370, 371.
— — — — and immunity to this infection, 370.
— — *S. recurrentis*, 145.
monkeys, experimental tick-transmitted relapsing fever in, 143, 144, 147.
morphology of
new spirochaete (!) in human blood, 371.
spirochaete of relapsing fever, Darjeeling, 369.
Nasik, epidemic of relapsing fever, 367, 368.
neosalvarsan, resistance to, of certain spirochaetes, 146.
phenol, action on spirochaetes, 146.
rabbits, immunizing experiments on, 148.
rats, and immunity to *S. duttoni* infection, 370.
references to literature, lists of, xxi-xxii, lvi.
salt solution, physiological, action of on spirochaetes, 146.
salvarsan, as influenced by immune substances, 370.
— resistance to, of certain spirochaetes, 146.
saponin, action on spirochaetes, 146.
sodium compounds, action on spirochaetes, 146.
Spirochaeta carteri, 369.
— *duttoni*, 149, 365, 368.
— — and experimental immunity, 370, 371.
— — experimental infection with, 147.
— — transmission experiments with, 144.
— *gallinarum*, 145, 149, 365.
— *microdentium*, 146.
— *mucosum*, 146.
— *novyi*, flagellates in, 149.
— *pallida*, immunity reactions of, in cultures, 147.

Relapsing Fever—*cont.*
Spirochaeta pallida, resistance of, to chemical and other action, 146.
— *recurrentis* infection in mice 145.
— — group, 147.
— *refringens*, 146.
spirochaete, supposed new, in human blood, 371.
spirochaetes, action on, of antiformin, 148.
salvarsan, neosalvarsan, etc. 146.
— and argas, 365.
— cell-penetration by, 148.
— cultivation of, 146, 147, 148, 371.
— division of, 149.
— in guinea-pig, 371.
— and Leishman's granules, 365, 366.
— resistance in cultures to chemical and physical agents, 146.
— and ticks, 143-145, 365, 368.
— of relapsing fever.
biology of, 144.
localisation of, in ticks, 143. 144
relation of, to cells of host, 148, 149.
strains of, differentiation of, by crossed immunity test, 147.

— —, game and *Glossina*, relations of, 36–37, 236, 238–239, 345, 347, 348, 458–4 9, 580.
— —, long survival of untreated cases, 130.
— —, serum experiments in, 247, 248.
— —, fixation of complement in, 461.
tryparosan, *see* treatment.
trypasafrol, *see* treatment.
trypsin, *see* treatm nt.
tsetse-flies, *see Glossina.*
— -free districts, transmission of trypanosomiasis in, 129.
Uganda ,sleeping sickness in: fatality of, 125.
investigations on, 240.
ungulates, trypanosomiasis in, 347.
vaccine treatment, *see* treatment.
Victoria Nyanza, isolated focus of trypanosomiasis on, 125.
warthogs and *Glossina*, 590.
— and *T. simiae*, 582.
Wassermann reaction in human trypanosomiasis, Senegal, 455.
waterbuck and *T. rhodesience* in, 126.
Sleeping Sickness, &c.—*cont.*
wild animals, *see* game.
Zemio, *see* French Congo.

Sprue, 399-400.
dietetic treatment of chronic diarrhoea and sprue, 399, 400.
Porto Rico, notes on sprue in, 399–400.
references to literature, xxviii-xxix, lxi.
santonin, yellowed, in treatment, 400.
strawberries, fresh, in treatment, 399.

Typhus Fever, 1-5, 639-644.
America, United States of, typhus in, 3, 639, 644.
bacteriology of typhus, preliminary note on, 643.
bed-bugs, transmission experiments with, 4.
Belgrade, observations on typhus at, 639.
blood examination in diagnosis, 643.
— findings in typhus, 640, 641, 643.
Bosnians, observations on typhus amongst the, 641, 643.
children, typhus in, 2, 644.
complement deviation in diagnosis, 641, 644.
cultivation experiments, 642, 643.
diagnosis of typhus:
by blood examination, 643.
by serum tests, 644.
Diplobacillus exanthematicus (Rabinowitsch), 642, 644.
etiology of typhus, observation on, 640, 641, 642.
Galicia, epidemiology of typhus in, 642.
Georgia, U.S.A. typhus in, 3.
Hebrides, typhus in the, 1.
immunity, natural and induced 4, 643.
incubation period in typhus, 639.
lice, transmission experiments with, 4, 640.
Madrid, typhus in, 2.
Massachusetts, typhus in, 3.
Moscow, typhus in children in, 2.
pigs, susceptibility to typhus of young, 5.

Typhus Fever—*cont.*
references to literature, lists of, xxvii, lx.
serum, diagnosis of typhus, 642, 644.
—— preventive action on monkeys, of immune, 4.
Servian army, cases of typhus in, 639.
sporadic case of typhus in America, 644.
